

# Batshi Home — Full Store Rebuild

**Prepared** 8 Sep 2026    **Project** batshi\_sarusi    **Scope** From scratch, WooCommerce retired  
**Currency** ILS, pre-VAT

A bespoke commerce platform replacing WordPress / WooCommerce entirely: custom storefront, custom API, own database, **custom admin panel**, own pricing / shipping / coupon engines, Israeli payment integrations, and full migration of the existing ~3,400-product catalog with customers and order history.

**Bottom line:** anchor ₪520,000, range ₪460,000–580,000, hard floor ₪400,000 (only by cutting scope — see notes). Timeline **9–11 months solo** or ~6 months with a second developer. Milestone-billed across 4 releases. This is a ~6× multiple of the headless path already delivered — **read the reality check before pitching it.**

## THREE WAYS THE NUMBER CHECKS OUT

### Triangulation

| RECONSTRUCTED EFFORT                                                          | GLOBAL MARKET COMP                                                                                                    | VS THE HEADLESS PATH                                                                        |
|-------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| ₪475k–555k                                                                    | \$120k–300k                                                                                                           | 6.5×                                                                                        |
| ~183 senior days × ₪2,600–3,000/day, including a 15% parity-risk contingency. | Full custom platform / composable rebuild. Mid-market ecommerce builds run \$80k–250k; headless-from-scratch \$150k+. | Headless-on-Woo delivers ~80% of the customer-facing upside for ~₪80k all-in (Phase 1 + 2). |

## FULL SCOPE • NOT STARTED

### Itemized by work area

| WORK AREA                                                                                                                                                                                           | DAYS | FEE    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|--------|
| <b>Discovery, architecture &amp; data modeling</b>                                                                                                                                                  | 10   | 26,000 |
| Requirements, full domain model (products / variants / attributes / pricing / inventory / tax / shipping / coupons / orders / customers), infra plan, migration plan. Builds on the existing audit. |      |        |

| WORK AREA                                                                                                                                                                                                                                                                                                                                                       | DAYS | FEE    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|--------|
| <b>Core platform &amp; admin foundation</b><br>Postgres schema + migrations, ORM & repository layer, admin auth + RBAC (owner / staff / warehouse), audit log, settings (shipping zones, tax, payment config, store hours / Shabbat), dashboard shell.                                                                                                          | 18   | 44,000 |
| <b>Catalog service + admin</b><br>Product CRUD incl. variable products (matching the current 624), 167 nested categories, 5 brands, global + product attributes, media upload / management, bulk edit, CSV import/export. Storefront catalog API: list, filter, sort, paginate.                                                                                 | 20   | 52,000 |
| <b>Search</b><br>Meilisearch / Typesense indexing pipeline, Hebrew tokenization, faceted filters with live counts, autocomplete, synonyms.                                                                                                                                                                                                                      | 6    | 16,000 |
| <b>Pricing, cart &amp; shipping engine</b><br>Server-side cart; pricing engine replacing Advanced Woo Discount Rules + ELEX Flexible Pricing (role / qty / wholesale); tax rules; shipping-rate engine replacing PI SOL conditional flat rates (₪39 / free-over-threshold / ₪100 / furniture / courier ₪299–499, tag-based exclusions); free-shipping progress. | 18   | 46,000 |
| <b>Checkout &amp; payments</b><br>Grow (cards + Bit) + Meshulam integration, webhook handling, 3DS, order state machine, refunds, reconciliation, PCI-safe. Highest external-dependency risk.                                                                                                                                                                   | 15   | 40,000 |
| <b>Order management (admin)</b><br>Order list / detail, status workflow, fulfillment, partial refunds, invoices & packing slips, internal notes, customer comms, store-closed handling.                                                                                                                                                                         | 12   | 32,000 |
| <b>Customer accounts</b><br>Registration, login, guest checkout, saved addresses, order history, reorder, password reset. Storefront + admin customer views.                                                                                                                                                                                                    | 8    | 20,000 |
| <b>Coupons &amp; promotions engine + admin</b><br>Coupon types, cart / product rules, scheduling, usage limits, store-credit / gift-card-style balance.                                                                                                                                                                                                         | 7    | 18,000 |
| <b>Inventory &amp; pre-orders</b><br>Stock tracking, cart / checkout reservations, low-stock alerts, back-in-stock, pre-order flow.                                                                                                                                                                                                                             | 6    | 16,000 |
| <b>Storefront frontend</b><br>Next.js SSR/SSG for SEO across 3,400 products: home / merchandising, category pages, PDP with gallery + variants, cart, checkout flow, account area, legal + contact pages. RTL design system, mobile-first, a11y, structured data, sitemaps, performance budget.                                                                 | 25   | 64,000 |

| WORK AREA                                                                                                                                                                                                                                            | DAYS       | FEE             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|-----------------|
| <b>Data migration</b><br>ETL from WooCommerce: ~3,400 products, 624 variable, 167 categories, 5 brands, images (download + re-host), customers, order history, coupons. Reconciliation, dry runs, 301 redirect map for all indexed Hebrew-slug URLs. | 12         | 32,000          |
| <b>Analytics, transactional email &amp; marketing</b><br>GA4 / GTM / Meta with server-side purchase events, consent management, order / shipping / account emails, abandoned-cart flow.                                                              | 6          | 16,000          |
| <b>Infra, DevOps &amp; security</b><br>CI/CD, staging + production environments, managed Postgres + backups, S3 / CDN, monitoring + alerting + error tracking, rate limiting, security headers, secrets management, load test.                       | 8          | 20,000          |
| <b>QA, UAT, launch &amp; hypercare</b><br>End-to-end + payment-sandbox testing, client UAT cycle, bug fixing, staged rollout, DNS cutover, 2 weeks post-launch hypercare.                                                                            | 12         | 32,000          |
| <i>Subtotal</i>                                                                                                                                                                                                                                      | <i>183</i> | <i>474,000</i>  |
| <b>Parity-risk contingency (≈10%)</b><br>You are re-implementing 4 mature plugins. Parity bugs in pricing / shipping mean wrong amounts charged. This buffer is not optional on a from-scratch build.                                                | —          | 46,000          |
| <b>Anchor total</b>                                                                                                                                                                                                                                  |            | <b>₪520,000</b> |

CANNOT SHIP IN ONE DELIVERY

## Milestone plan

| RELEASE                                                                                                                        | WINDOW    | FEE     |
|--------------------------------------------------------------------------------------------------------------------------------|-----------|---------|
| <b>M1 — Foundation</b><br>Architecture, data model, core platform, admin shell + auth, catalog model.                          | Mo. 1–2.5 | 88,000  |
| <b>M2 — Catalog &amp; storefront browse</b><br>Catalog admin, search, storefront catalog + PDP, catalog migration on staging.  | Mo. 2.5–5 | 150,000 |
| <b>M3 — Commerce core</b><br>Pricing / cart / shipping engine, checkout, payments, order-management admin, inventory, coupons. | Mo. 5–8   | 165,000 |

**M4 — Accounts, hardening & launch**

Mo. 8–10.5

117,000

Customer accounts, analytics + email, full migration, infra hardening, QA, UAT, cutover, hypercare.

**Total****₹520,000**

**Billing:** 15% mobilization on signature, remainder on milestone acceptance, 10% retention released 30 days after launch. Each milestone gated by a signed spec; anything outside it is a change order at ₹2,800/day.

**After launch:** a custom platform has no plugin vendor shipping security patches — that is now you. Attach a mandatory support contract: ₹7,000–12,000/mo, or ₹90k/yr.

## READ THIS BEFORE PITCHING

**Reality check****THIS IS PROBABLY THE WRONG PROJECT FOR THIS CLIENT**

Batshi Home is a wholesale-priced home-goods SMB. The headless-on-Woo path already delivered gives ~80% of the customer-facing upside — speed, design, mobile, SEO, discovery — for ~₹80k all-in, keeps a battle-tested admin, and keeps the whole WooCommerce plugin ecosystem doing its job. From-scratch is ~6.5× the cost, ~5× the timeline, and hands the client (and you) a bespoke admin, a bespoke pricing engine, and a bespoke shipping engine to own and patch forever.

Only pitch this if the client has a concrete reason Woo cannot continue: a licensing / cost ceiling they have actually hit, a performance wall the headless front end did not solve, a business model Woo genuinely cannot represent, or an investor / acquirer requiring fully owned IP. "It would be cleaner" is not a reason worth ₹520k of their money.

## ANCHOR

Open at ₹520,000, itemized + milestone plan. Do not present a lump sum — the client must see it is 15 distinct builds, not a website.

|                    |                                                                                                                                                                                                                                     |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FLOOR ₪400K        | Reachable only by cutting: swap the custom admin for Medusa / Saleor (–₪80–100k but you lose "fully owned"), drop order-history migration (–₪12k), defer the promotions engine to post-launch (–₪18k), shorten hypercare.           |
| DO NOT SOLO BLIND  | 10 months of solo delivery risk is high — one illness or one hard client and the timeline doubles. Price a second developer into M3 (commerce core) or extend the schedule and say so in writing.                                   |
| HIGHEST-RISK LINE  | Pricing + shipping engine. You are replacing Advanced Woo Discount Rules, ELEX Flexible Pricing, PI SOL shipping, and Smart Coupons. Get every rule documented and signed before M3 starts; the contingency lives here.             |
| PAYMENT DEPENDENCY | Grow / Meshulam headless support is still unverified from the audit. Do not sign a fixed price for checkout until the gateway vendor confirms an API flow — carve it out as T&M if they cannot.                                     |
| IF THEY HESITATE   | Offer the staged route: ship the headless storefront now (₪80k), run it 6–12 months, migrate the back office to custom later only if the business case still holds. Lower risk, same end state, and you keep the relationship warm. |

SUPPORTING THE NUMBER

# Headless vs from-scratch

|                          | HEADLESS (DELIVERED)                            | FROM-SCRATCH (THIS MEMO)                      |
|--------------------------|-------------------------------------------------|-----------------------------------------------|
| All-in price             | ~₪80,000                                        | ~₪520,000                                     |
| Timeline                 | ~2 months                                       | 9–11 months                                   |
| Back office              | WooCommerce, unchanged                          | Custom admin panel, owned + maintained by you |
| Pricing / shipping logic | Stays in Woo plugins                            | Re-implemented from scratch — parity risk     |
| Plugin ecosystem         | Kept (invoices, affiliates, pre-orders, POS...) | Each one now a custom feature or dropped      |
| Security patching        | Plugin + WP vendors                             | You, under a support contract                 |
| Customer-facing result   | Modern, fast, SEO-preserving storefront         | Same — plus fully owned data + IP             |

## Market context

- Israeli senior freelance day rate 2026: ₪2,000–3,800. At ~183 days this build is a ₪370k–700k span before contingency — the anchor sits mid-band.
- Global full custom / composable commerce platform: **\$120k–300k+**; agencies bill \$100–200/hr over 3–8 months with a team.
- Israeli "custom online store" quotes of ₪20k–50k are template WooCommerce builds and are **not comparable** — no custom admin, no engine work, no migration at this scale.
- The 15% contingency is standard for parity rebuilds and should not be negotiated away; it is the line that covers wrong-price bugs.

---

Existing store: ~3,400 products · 624 variable · 167 categories · 5 brands · 2,471 on sale · Grow + Meshulam payments · PI SOL shipping · ~15 commerce / merchandising plugins.
